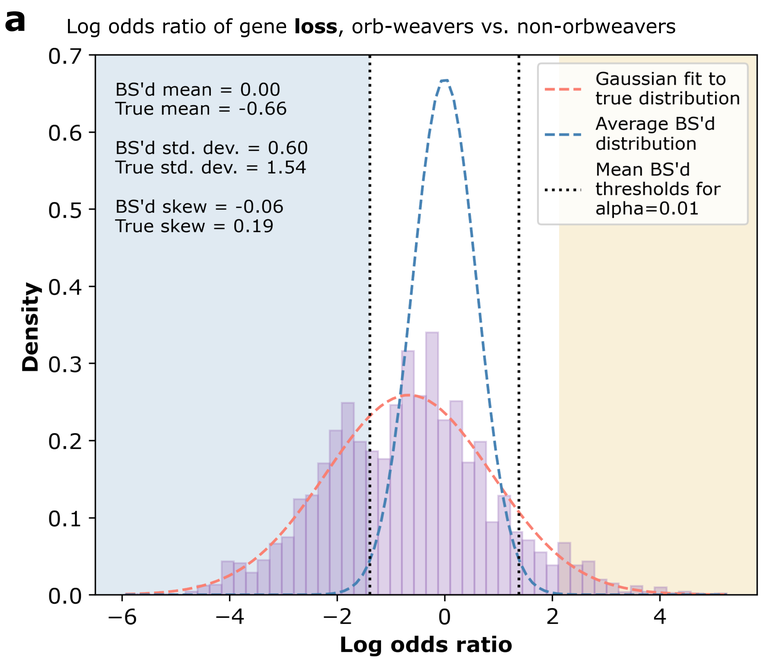
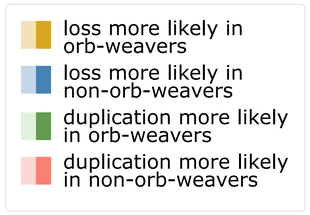
a

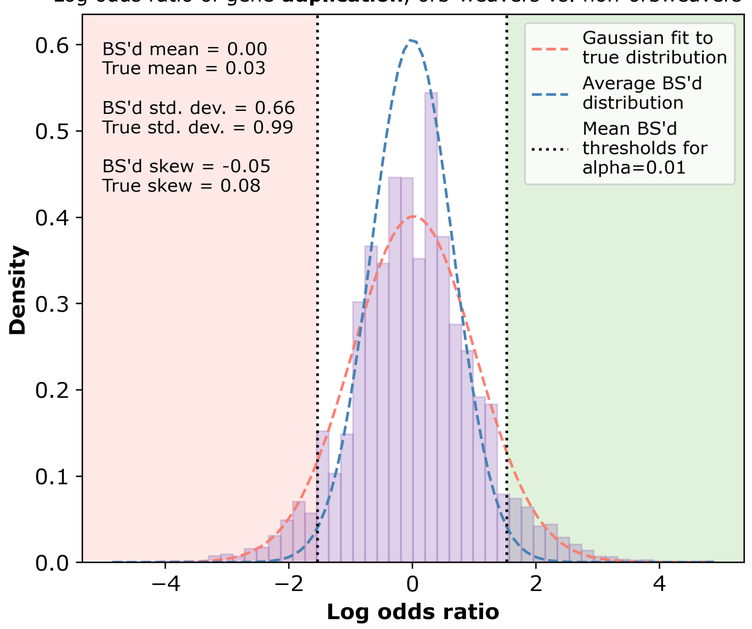


Log odds ratio of gene **loss**, orb-weavers vs. non-orbweavers
BS'd mean = 0.00
True mean = -0.66
BS'd std. dev. = 0.60
True std. dev. = 1.54
BS'd skew = -0.06
True skew = 0.19
Gaussian fit to true distribution
Average BS'd distribution
Mean BS'd thresholds for alpha=0.01
Density
Log odds ratio



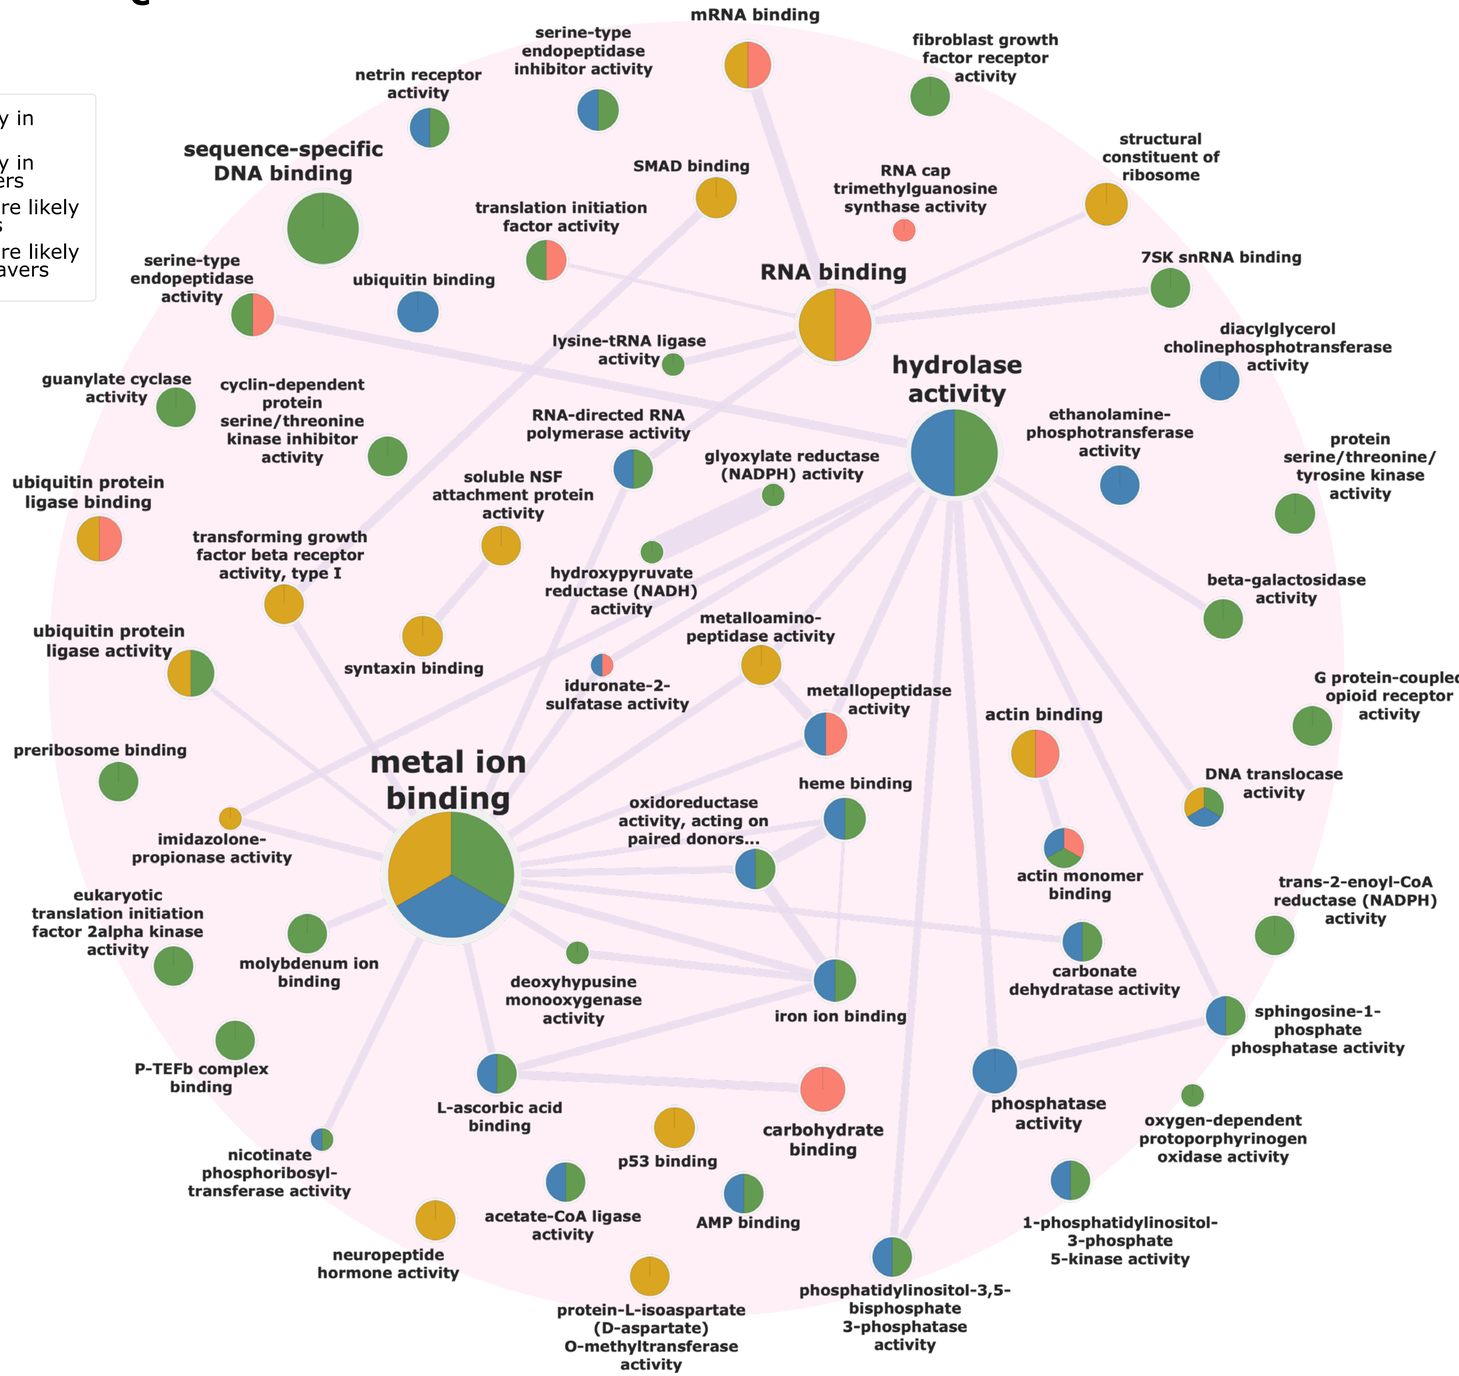
loss more likely in orb-weavers
loss more likely in non-orb-weavers
duplication more likely in orb-weavers
duplication more likely in non-orb-weavers

b



Log odds ratio of gene **duplication**, orb-weavers vs. non-orbweavers
BS'd mean = 0.00
True mean = 0.03
BS'd std. dev. = 0.66
True std. dev. = 0.99
BS'd skew = -0.05
True skew = 0.08
Gaussian fit to true distribution
Average BS'd distribution
Mean BS'd thresholds for alpha=0.01
Density
Log odds ratio

c



mRNA binding
serine-type endopeptidase inhibitor activity
fibroblast growth factor receptor activity
netrin receptor activity
sequence-specific DNA binding
SMAD binding
RNA cap trimethylguanosine synthase activity
structural constituent of ribosome
translation initiation factor activity
serine-type endopeptidase activity
ubiquitin binding
RNA binding
7SK snRNA binding
lysine-tRNA ligase activity
diacylglycerol cholinephosphotransferase activity
guanylate cyclase activity
cyclin-dependent protein serine/threonine kinase inhibitor activity
hydrolase activity
RNA-directed RNA polymerase activity
ethanolamine-phosphotransferase activity
protein serine/threonine/tyrosine kinase activity
ubiquitin protein ligase binding
soluble NSF attachment protein activity
glyoxylate reductase (NADPH) activity
transforming growth factor beta receptor activity, type I
hydroxypyruvate reductase (NADH) activity
beta-galactosidase activity
ubiquitin protein ligase activity
syntaxin binding
metalloamino-peptidase activity
iduronate-2-sulfatase activity
metallopeptidase activity
G protein-coupled opioid receptor activity
actin binding
preribosome binding
metal ion binding
heme binding
DNA translocase activity
oxidoreductase activity, acting on paired donors...
imidazolone-propionase activity
actin monomer binding
trans-2-enoyl-CoA reductase (NADPH) activity
eukaryotic translation initiation factor 2alpha kinase activity
molybdenum ion binding
deoxyhypusine monooxygenase activity
carbonate dehydratase activity
iron ion binding
sphingosine-1-phosphate phosphatase activity
P-TEFb complex binding
L-ascorbic acid binding
phosphatase activity
carbohydrate binding
oxygen-dependent protoporphyrinogen oxidase activity
nicotinate phosphoribosyl-transferase activity
p53 binding
acetate-CoA ligase activity
AMP binding
1-phosphatidylinositol-3-phosphate 5-kinase activity
neuropeptide hormone activity
protein-L-isoaspartate (D-aspartate) O-methyltransferase activity
phosphatidylinositol-3,5-bisphosphate 3-phosphatase activity
